SPECIALISTS IN CANCER
AND BLOOD DISORDERS

OHC. Start here.

WHAT IS A BREAST SURGICAL ONCOLOGIST?

A breast surgical oncologist is a surgeon who specializes in breast cancer surgery. OHC's specialized breast cancer surgeons are board certified and have completed additional fellowship training in breast cancer care. They have an in-depth knowledge of cancer biology, breast imaging, genetics, and the most advanced surgical options to help patients achieve the best outcome. With years of extensive training and education, they use specialized techniques to tailor their surgical approach to each patient's individual needs.

WHAT ARE BENIGN BREAST CONDITIONS?

A benign breast condition is a breast problem that is not cancerous. While these are not life-threatening, certain benign breast conditions may increase your risk of developing breast cancer in the future.

OHC provides you with breast surgeons who are up-to-date on the latest guidelines for high-risk screening and breast cancer prevention.

Conditions we manage include:

- Abnormal breast imaging
- Benign breast lesions (fibroadenoma, cyst)
- Breast symptoms (pain, mass, nipple discharge)
- High-risk lesions (such as LCIS, atypical hyperplasia, papilloma, radial scar)
- Male breast disease
- Women at high risk for breast cancer (genetic mutations such as BRCA, family history of breast cancer)

OHC breast surgical oncologists, Nicole M. Melchior, DO, FACS, and Abigail M. Tremelling, MD, FACS

OUR TEAM APPROACH TO BREAST CANCER CARE

Breast cancer treatment is complex. The collaboration of a multidisciplinary team of experts from specialized fields within oncology is critical. Your OHC breast surgeon and care team will guide you through every step of therapy, from diagnosis through treatment and survivorship. Together, we will develop a personalized treatment plan based on your individual diagnosis. We will also discuss your individual life circumstances as they relate to your care. Your personalized treatment plan may include:

- Cancer Genetic Program
- Cancer research and clinical trials
- Cellular therapy
- Chemotherapy
- Collaboration with plastic surgery
- High-Risk Breast Program/Genetic Counseling
- Hormonal therapy
- Immunotherapy
- Radiation therapy
- Supportive Care Program
- Surgery
- Survivorship

OHC CLINICAL TRIALS

OHC's team of cancer experts use the most advanced treatments for your plan of care and has a nationally recognized clinical trials program that evaluates the newest, most promising cancer treatments. OHC partners with US Oncology Research, an experienced network of more than 800 dedicated researchers with access to more than 400 Phase 1-4 clinical trials. The network has played a role in more than 100 FDA approved cancer therapies. Ask your care team if a clinical trial is available for you.

WHAT IS BREAST CANCER?

Breast cancer is a broad term for any cancer that originates in breast tissue. The average risk of a woman in the United States being diagnosed with breast cancer at some point in her lifetime is about 13%, or 1 in 8 women. There are many different types of breast cancer and each patient is treated individually.

OHC provides you with breast surgeons who have extensive expertise in breast cancer in all its forms. They are highly skilled in the latest technology, minimally invasive advanced surgical techniques, and the most promising new treatments to surround you with everything you need to focus on what matters most—beating cancer.

Conditions we treat include:

- Ductal Carcinoma In Situ (DCIS)
- Inflammatory Breast Cancer
- Invasive breast cancer
- Male breast cancer
- Paget's disease
